

Human Torso

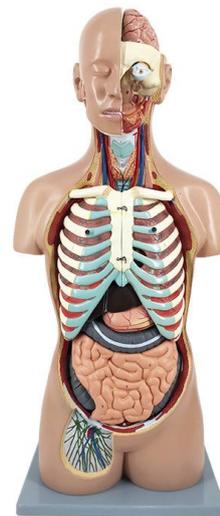

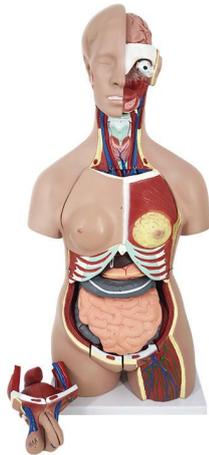

27 Parts Dual-Sex Life-Size Torso with Open Back

This model provides an intuitive and comprehensive way to explore the internal anatomical structures of both male and female human bodies. Designed for clarity and practicality, its removable components are secured by a combination of hooks, magnets, and small pegs, ensuring a seamless, uninterrupted view of intricate anatomical details without compromising structural stability.

18 Parts Unisex Life-Size Torso with Open Back

Crafted for focused anatomical study, this premium open-back torso comes with 18 removable parts: 3-piece head (with 2-part brain half), 2-piece lungs/rib cage, 2-piece heart, liver, 2-piece stomach, kidney (front plate), spleen, 4-piece GI tract (transverse colon, caecum included), bladder, and 8th thoracic vertebra—enabling close-up exploration of key body components.

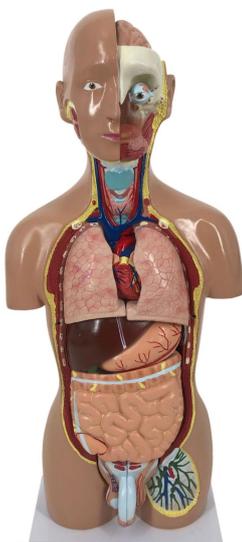

33 Parts 85cm Dual-Sex Human Torso Model

This life-size open-back torso, featuring 33 detachable parts, delivers exceptionally realistic reproduction of anatomical structures with meticulous detail. Covering key body systems, all components are fully accessible—ideal for in-depth dual-sex anatomical study and demonstration.

40 Parts Dual-Sex Life-Size Torso with Open Back

This 40-detachable-part life-size open-back torso captures human torso anatomy in full detail. Featuring exposed back muscle layers, spinal column, nerves (with 2 removable vertebrae with full details), one-side exposed brain, front-exposed neck organs, interchangeable genital inserts, and 2-piece dissectible stomach—it's ideal for patient education, school, and university demonstrations.

15 Parts 45cm Male Torso Model

This 45cm male torso model—featuring an open back and 15 detachable parts—delivers exceptionally realistic reproduction of anatomical structures with meticulous detail. Covering key body systems, all components are fully accessible, ideal for anatomical study and demonstration.
