

Skull

Colored Human Skull

This model shows the human skull, which is composed of many individual bones that fuse during development.

This skull kit is a natural cast that can be disassembled into 22 separate bones, making the complex structure easy to study.

The bones can be reassembled using stable, inconspicuous connectors along the simplified skull sutures.

The 22 bones are colored in 9 distinct teaching colors for easy identification, with each pair of bony plates sharing the same color.

Dimensions (cm): 12 × 17 × 20

Model of Skull Bones

This professional skull set is a natural cast showing the human skull, which is formed by multiple bones that gradually fuse during growth.

It can be disassembled into 22 individual bones for easy study of its complex structure.

The bones can be reassembled with stable, hidden connectors along the simplified sutures.

All 22 bones are colored in 9 distinct teaching colors for clear identification, with each pair of bony plates in the same color.

Dimensions (cm): 12 × 17 × 20

Human Skull, 3-parts

Life-size, highly detailed human skull model with full anatomical structures.

The skullcap is removable to display internal cranial anatomy.

The mandible is articulated and removable.

All joints, sutures, fissures, foramina and processes are accurately represented.

Human Muscular Skull, 3-parts

This painted and numbered human skull model marks the origins and insertions of 48 muscles.

It features a removable skullcap and articulated mandible, suitable for anatomical study and educational demonstration.

Skull with Brain Model

This anatomical model shows a human skull with a brain inside.

It can be disassembled into 10 parts and the lower jaw is movable.

Human Skull

This model is cast from a natural bone specimen with detailed suture lines and fossae. It features a removable calvarium, detachable maxilla and hinged mandible.

Each bone is painted a different color for easy identification and hand-lettered with bone names.

Model of Adult Skull

Plastic, bone-colored skull with hinged jaw and removable calvarium.

3 teeth removable.

Dimensions (cm): 22 × 11 × 15

Children's skull model

Plastic bone-colored skull with hinged jaw and removable calvarium.

Dimensions (cm): 22 × 11 × 15

Model of Skull Bones

This highly detailed human skull is disarticulated into multiple sections.

The calvarium is horizontally sectioned, with a hinged mandible.

The skull base is sagittally sectioned to reveal all three cranial sinuses.

Dimensions (cm): 12 × 25 × 31

Didactic Skull on Cervical

Spinal Column, 4-part

This model uses different colors to show the shapes and connections of skull bones.

Flexibly mounted on the cervical spine, it also displays the hindbrain, spinal cord, spinal nerves, vertebral arteries, basilar artery and posterior cerebral arteries. Mounted on a stand.

Dimensions (cm): 15×15×30
