

## Suture Pad

### Suture Pad

- High-quality silicone, soft and durable
- Three layers of skin: epidermis, dermis, and hypodermis
- Simulated skin texture, protective net design, anti-tear function

## Suture Pad

- High-quality silicone, soft and durable
- Three layers of skin: epidermis, dermis, and hypodermis
- Simulation of skin texture
- You can make DIY incisions or wounds on the pad

For different types of suturing training purposes

### Suture Pad

- Stronger than ordinary surgical pads
- Food-grade silicone, odorless, safe and reliable
- Three layers of skin; the epidermis layer, the adipose layer, and the muscle layer
- The surface of the skin features a protective net design, and the skin texture is highly realistic.

## Suture Pad

- 3D Stereoscopic Simulation Structure
- Soft, with a realistic touch
- Simulate different wounds to provide more ways for suturing practice

## Suture Pad

- Food-grade silicone, odorless, safe and reliable
- The silicone toy precisely mimics human tissues to meet the required high standards for practice
- Various types of wounds, enhancing practical experience
- The skin surface is protected, allowing for repeated use

## 2 in 1 Suture Pad

- Used for practicing intravenous injection, suturing and wound management
- High-quality silicone material, with a soft and realistic touch
- It has genuine skin texture and elasticity
- Can be repeatedly practiced

## Suture Pad

- Customized Wound
- The cutting, piercing and suturing feel is extremely realistic.
- Food-grade silicone, odorless, safe and reliable

## Intestinal Suture Model

- Surface simulates grease, providing more realistic training.
- Applicable to various intestinal anastomosis practice exercises
- The intestinal model has two different colors inside and outside, truly simulating the actual object.
- Inner design of protective net to prevent tearing during suturing

## Cleft Lip Suture Model

- Specifically designed for practitioners to learn lip closure and knotting techniques
- Possessing excellent skin elasticity and flexibility
- Soft texture, with a realistic feel when touching the skin and underlying tissues
- It can be practiced hundreds of times and is reusable.

## Perineal Suture Model

- Safe, odorless, healthy, environmentally friendly
- The suture line is not prone to tearing and is durable
- Three-in-one, left, right, and middle incisions
- Flexible to adjust the position, length and depth of the incision
- Suitable for gynecological professional fields such as medical colleges, health schools, and hospitals

As a practical teaching for episiotomy and suturing

## Perineal Suture Model

Various types of wounds can meet the needs of various suturing practice scenarios.

- Designed in a 1:1 scale proportion to the human mouth
- Food-grade silicone material, durable and long-lasting
- The high-fidelity training effect is more realistic.
