

Urine Bag

Product features

Durable & Flexible: Soft PVC material resists kinking and cracking, ensuring reliable performance even during patient movement.

Large Capacity: Accommodates extended drainage periods, reducing the frequency of bag changes and minimizing patient disturbance.

Sterile & Hygienic: Individually sealed in sterile packaging, the bag is ready for immediate use, preventing urinary tract infections (UTIs) and ensuring clinical safety.

Leak-Proof Design: Precision-sealed seams and secure connectors prevent accidental leaks, maintaining a clean, dry environment for patients and caregivers.

Clear Volume Markings: Bold, easy-to-read measurement lines (0–2000ml) allow accurate monitoring of urine output.

Product Overview

Our sterile urine collection bag is a single-use medical device designed for safe, hygienic urine drainage and storage in hospitals, nursing homes, and home care settings. With regular 1000ml and 2000ml capacity and leak-proof design, it provides reliable performance for patients requiring urinary catheterization, ensuring comfort and infection control.

Customization Options

Capacity Variants: 1000ml, 1500ml, and 2500ml and so on available to meet diverse clinical needs.

Branding & Printing: Custom logos, patient information fields, and multilingual labeling (MOQ applies).

Accessories: Optional anti-reflux valves, sampling ports, and hanging hooks for enhanced functionality.

Packaging: Custom sterile pouches or bulk carton packaging to align with export requirements.
